

10 Capabilities of FlexRule's Decision-as-a-Service Platform

When you are implementing complex applications, services like microservices or business processes, it is always a challenge to share the business logic. With decision-as-a-service, you can simplify the logic of your services, extract the business logic and share it across all of your services, applications and processes in a manageable manner.

1 Simple deployment
(automated and manual)

2 Allows all technologies, platforms and devices to use centralized decision-making across the enterprise and multiple applications

3 REST API for execution, management and monitoring

4 Multiple versions of a package and logic (e.g. decision)

5 Scheduling decisions for execution based on time frames

6 Ease of environmental space management (e.g. promoting rules from test to the production environment)

7 Managing and configuring different environmental settings (e.g. database connections, etc.)

8 Controlling permissions, security and ownership at a detailed level out-of-the-box

9 Responsive Web-based console for Administration

10 Scalable, event-driven architecture
